

OVERSIGHT NOT CONTROL

But what happens when the evil Health Plan tries to take all of Grandma's money and let her die for profit? Capitalism vs. Communism

		Capitalism with Oversight	Communism	Ipsum dolor amet dolor
1	Allow the Free Market to function	✓		<ul style="list-style-type: none">• Creates competition and drives costs downward• Creates innovation and efficiencies that is good for cost, service, and quality• Requires oversight to prevent fraud, waste, and abuse—which happens in capitalism without oversight
2	Control the market to ensure compliance with government directives		✗	<ul style="list-style-type: none">• Drives up costs, and does not "contain" costs• Kills innovation and efficiencies by mandating and micro-managing business functions• Does not contain fraud, waste, and abuse—usually participates in, and increases these issues
3	Government Oversight of the Free Market	✓		<ul style="list-style-type: none">• Requires transparency—in costs, expenses, and functions of the Health Plan• Requires value for dollars—audits, and other reasonable regulatory controls• Ensures a complaint and oversight mechanism—to ensure a remedy to any disputes

The current system designed is to drive obedience through government control, as we have witnessed our healthcare system is almost socialized and government controlled. The Health Care Liberty Plan is designed to free the American healthcare system from this oppression and allow it to thrive under a free market.

1. The free market always drives down cost through competition and increases innovation from the same. As history has shown us, capitalism left unchecked can corrupt into a brutal financial caste system; however, history has also shown us that capitalism with checks and balances, and appropriate oversight—is the winning combination to create a merit system that allows equal individuals the ability to thrive. The free market will innovate and drive up quality, as competition to attract consumers to your product is allowed to shepherd this process.
2. The current policy environment is a tightly controlled and heavily regulated government system. This system has driven costs through the roof, while claiming to be affordable. They never disclose the cost in taxpayer money that is required to keep the system from imploding, because people would be outraged if they knew. It is inefficient and unsustainable.
3. The appropriate amount of government oversight and transparency needs to be clear, to avoid future heavy handed control of this free market. Proper oversight can prevent or reduce negative impacts from the free market, and ensure consumer safety and protections.
